

Using Soil Moisture Sensors on Your Farm

Reliable water access throughout the growing season is an increasing concern for farmers on the Oregon Coast. Soil moisture sensors can be a helpful tool for making management decisions related to water use and water use efficiency on farms. At this event, we will talk about several practical uses of watermark soil moisture sensors and share case studies of how farmers are using this tool to make on-farm decisions that help strengthen the water resilience of their farms.

**Thursday, October 15
12:00-1:00 PM**

Online via ZOOM
